SPERMATOZOA AND IN THE PROSTATE.
SIMILARITY: Belongs to the beta-microseminoprotein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IsoId=P08118-2; Sequence=VSP_003275; VSP_003276; TISSUE SPECIFICITY: Strongly expressed in prostate, liver, kid breast and penis. Also expressed in pancreas, esophagus, stome deodenum, colon, trachea, lung, salivary glands and fallopian tube. PSP94 is expressed in lung and breast, whereas PSP57 is found in kidney and bladder.
MISCELLANGOUS: SPECIFIC RECEPTORS FOR THIS PROTEIN ARE FOUND CREENERS, NEW THE CREENERS FOR THIS PROTEIN ARE FOUND CREENERS.

Nol. Gen. Genet. 242:263-271(1994).

-!- FUNCTION: This protein promotes the GTP-dependent binding aminoacyl-tRNA to the A-site of ribosomes during protein biosynthesis.

-!- SUMCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the GTP-binding elongation factor f EF-Tu/EF-1A subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                CANAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TIGRFAMS; TIGR00483; EF-1_alpha; 1. Patent NO. 5817476

PARENT INFORMATION:
APPLICANT: Lin, Lih-Ling
APPLICANT: Graham, James
TITLE OF INVENTION: NOVEL INTERLEUKIN-1 RECEPTOR
TITLE OF INVENTION: INTERCELULAR LIGAND PROTEINS AND INHIBITORS OF LIGAND
TITLE OF INVENTION: BINDING
NUMBER OF SEQUENCES: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 8

US-09-328-352-8124

US-09-328-352-8124

Paquence 8124, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE FERENCE: GTC99-03PA

TITLE FERENCE: GTC99-03PA

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252
